

Audit BASF's ibuprofen facility in Bishop, Texas without leaving your desk with BASF Pharma Solutions' virtual audit service.

BASF's ibuprofen production process employs an innovative, sustainable, efficient technology that has revolutionized bulk pharmaceutical manufacturing.

Recent investments to the site include new analytical instrumentation in the quality laboratory, upgrades to process equipment, and digitalization tools.

Now you can take an even closer look inside the facility with our virtual audits.

State of the art technology using actual footage from the Bishop facility

Immersive multi-media experience, including 360° views, videos, photos, presentations and more

Includes highlights of the site's history, process chemistry and quality systems

Extra focus on areas not typically accessible during in-person audits, including packaging, laboratory and warehouse

Easy to navigate and create a customized experience based on auditor interests and requirements

FAQ

Will I see what would typically be seen during an in-person audit?

Yes, tours of the plant will be similar to a face-to-face audit, but with additional focus on packaging, laboratory and warehouse. You will receive the same introductory presentation as during an in-person audit.

Is Train B included in the virtual audit?

Yes, Train B equipment is included in the virtual audit.

Is an NDA required for the virtual audit?

Yes, a virtual audit-specific NDA is required.

How will I be able to access the virtual audit content?

You will receive login information after signing the NDA. The login is only active for a specified amount of time.

How is the virtual audit different from an in-person audit?

You will be able to spend as much time as you would like exploring each area. You will also be able to virtually "enter" the packaging room, which is not permitted during an in-person audit. However, you will not have the chance to interact with people in real time during a virtual audit.
